

# **The Game Hive**

Gene Ni, Hanish Vadlamudi, Celine Oh, Jason Abucay, Ashton Kabou

# **Section 1: Introduction**

The Game Hive is an app that gamers could record, and find new games that interest them. Through machine learning, The Game Hive creates specially catered recommendations to gamers. The users could create lists, rate games after completing them, and create their own reviews. This information would be used to create personalized game recommendations of all sizes. It can also serve as a database for games as well.

## **Stakeholders:**

Gamers, game developers, or just anyone who wants to delve in the world of games to get recommendations or log what they have played so far. 

## **Special Features:**

The app will have features that let you add specific games to your favorite list and recommend similar games. It will give descriptions of the different games you have selected. The app will be able to connect to game libraries and track time spent on games too. There will be a front page recommending games as well based on category and popularity.

## **Scope:**

The scope of our app includes all games from indie to triple A games. The Game Hive would act as a database for all games that are registered across all platforms. Anybody who played games could find their place in our app. Game developers could also register their game on our platform for a chance to be recommended to players. Lastly, to create a personalized touch, we will use AI to create specialized recommendations. Some things we hope to exclude are game related shows, fake games and scams.

## **User Types:**

### Intended Users:

The primary target user would be people who love video games and keep track of what games they have played so far and what games they want to play in the future.

### Persona:

Say Timmy just finished a game and he wants to log it. Well he would join our app and use it to log what games he played. Now he is thinking about what to play next. Well he could use the recommendation feature to figure out what to play next based on his interests and his logs.

### Potential Benefits:

Irregular users could use our app to check out what games are popular right now or have some common interest in games they know, providing them with some useful information for current games they might wanna buy as a gift to someone else.

### Different User Types:

The app will have the option in the settings where the user will have the option to switch from one profile to another one, and if the game keeps track of wins and losses, the user will have the option to play in creative mode.

## User Performable Tasks:

Users would be able to use the app to first track what video game they have played by manually logging it in. There is a recommendation system based on the games they played. They could connect this app with the platform they're playing the game on to track time spent on each game as well.

Task	Function
Favorite list	Users can mark which games they like the most.
Games Database	Contains an extensive collection of information regarding games from all platforms. Developers could register their own games after being published to a distributor.
Personalized Recommendations	The machine learning model can predict what game the user should play next based on their log and the genres of the games they played.
Discussion Forums	Global chat with other users or with users of a particular organization within the game (clans, groups)
Historical	Users can keep track of their progresses
Ratings	Users can rate games on a scale of 1-10, Database can sort from which games scale the highest
Popularity	Will rank the top games by rating showing which ones are trending or are currently popular.

## Section 2: Context

### Market Comparison and App Rationale

There are a few major apps and websites that offer similar functionality. There seem to be a few major websites that offer similar services but not as many apps that focus on it particularly. This provides a good market place for an app to rate games and get recommendations for mobile app users.

- Steam
- Metacritic
- Opencritic
- Epic Games Store

These are all websites that offer similar functionality.

One product we can think of is IGDB. It doesn't recommend video games but it does store video game data and future and past releases of games. Another would be Backloggery, in which users could create lists to keep track of what they have played and what they are planning to play.

The Game Hive builds on these ideas that were introduced by the current platforms listed above. For example using your log and a machine learning model, our app can give you your next video game to play based on your liked and disliked games. These recommendations use your personal ratings and reviews to determine the next game you would enjoy. There are many different video game distributors in the market, but there is no centralized app where gamers can go to express their feelings and chat with other players regarding video game recommendations and suggestions. Also because of how the current video game distribution industry currently functions, each platform contains different games, separating gamers and recommendations because they are only confined to that platform. Our app would be able to recommend any game from any distributor. Some of us are gamers ourselves, therefore we understand the problem of lacking a general place to express your opinions regarding various games. We have also experienced the recommendation algorithms of various platforms and determined that they are heavily influenced by the game publishers and not your personal preferences. We are motivated because we all love videogames and one of the hardest things to do is figuring out what to play next once you finish a game. It is a common problem we all have and we aim to do it better than other services.

## **Getting Data and Integration**

- Forums would be managed by the users. They will have the ability to create, delete, alter and comment posts.
  - Recommendation data would be obtained voluntarily by the users to create personalized recommendations.
  - Statistics such as ratings will be created by users. Ratings would be shown from other platforms as well. We will show the game's ratings on Steam, Epic Games, Metacritic, IGN, etc.
  - Video game metadata would be obtained from video game distributors such as Steam, Epic Games Store, etc. Rating information would be obtained from Metacritic and Opencritic. Other game description data could be obtained from open resources such as wikipedia and other forms of sources.
- 
- Staff will have no need to manage data manually, it should all be done automatically by the system

Our app can interact with other programs/applications and game platforms such as steam where you can connect the program to track how many hours you play.

💡 I think our app can include contact lists so users can automatically add their friends, some other things it would access would be a calendar so it can pin upcoming game releases the user would like to know about on their calendar.

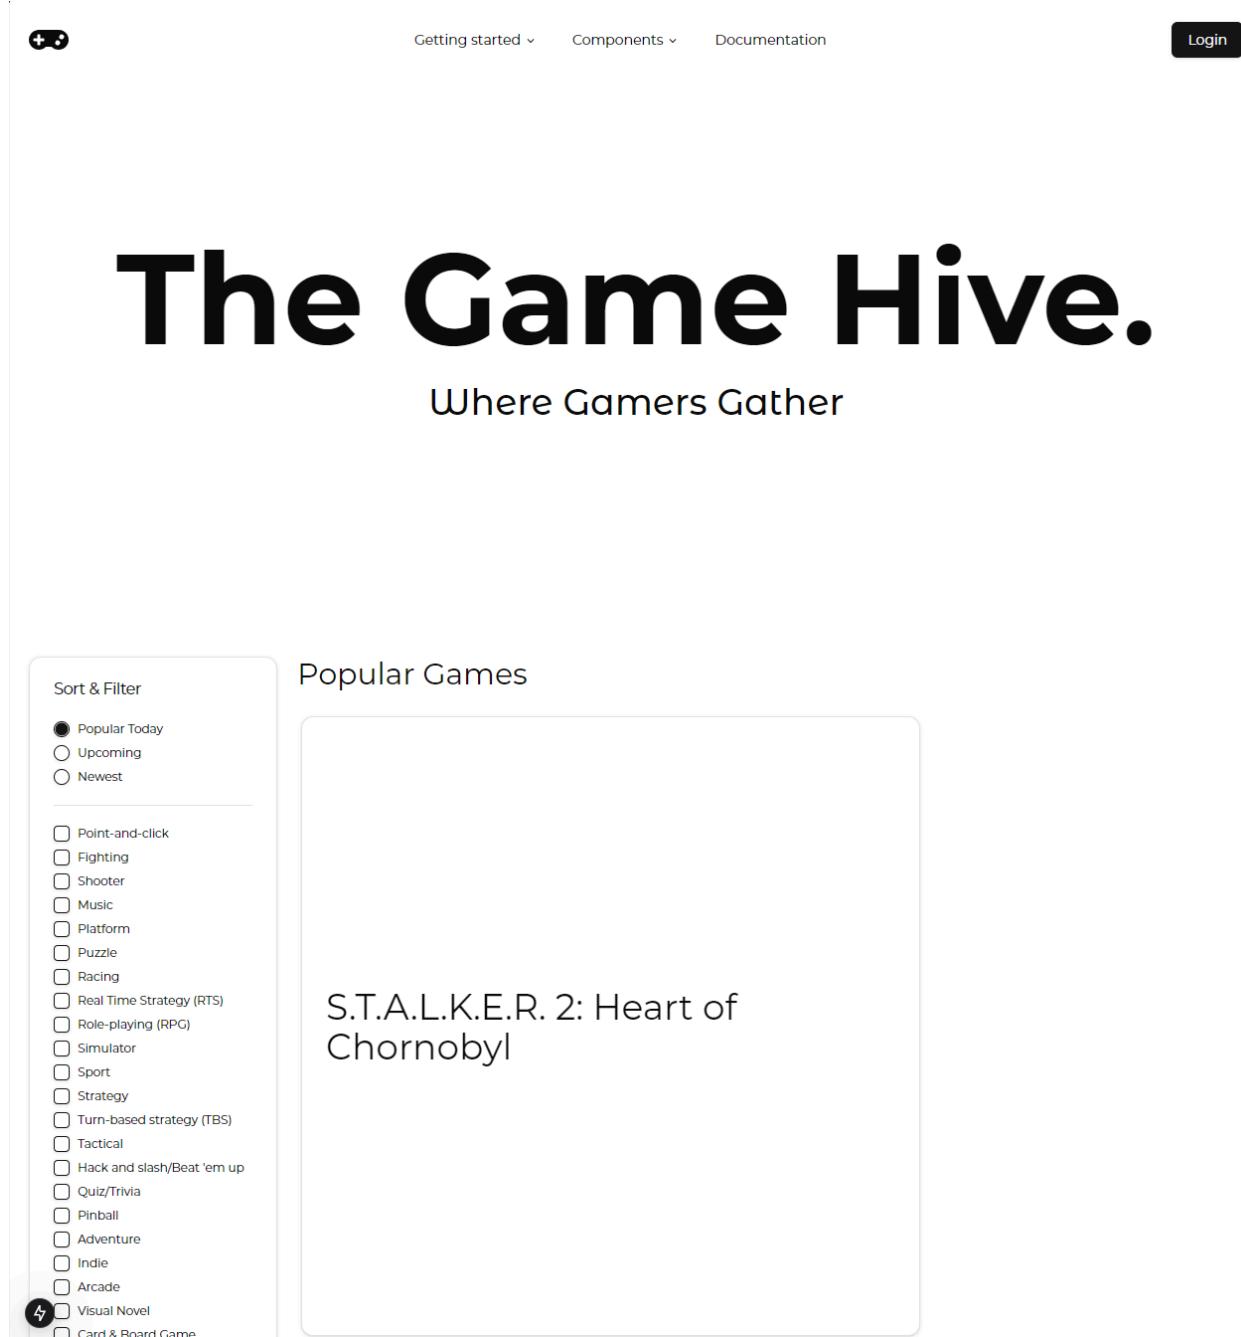

Connections to video game distributors such as Steam would be necessary to track the progress of games. This would help us calculate how fast you are completing a game, and other stats that tell us your engagement with the game. This would be used as a statistic to recommend video games to users.

## **Social Implications**

Users will have many benefits using the app, such as having a tailored list of games matching their interests and saving the games they enjoyed or plan to play later on a list. In addition, users will be able to see reviews for a game before playing and leave a review after playing the game. Our app will have forums based on the genre of the game, where users can exchange their thoughts in real-time. Some users might have data ethics concerns. Our game uses machine learning algorithms in order to suggest games that match the user's interests, so we will eventually have to collect data to know users' preferences. Also, a poor algorithm could frustrate users if the suggestion does not match their interest or if the suggestion is too narrow, as it does not allow users to explore another genre of games. The only thing we can think of is that it would be storing confidential data, such as maybe date of birth, so it can show mature games. To avoid violating any privacy laws and ethics, we will secure our data so that no data can be traced back to a single person and can comply with data privacy regulations. There could also be licensing issues if a distributor does not like their games being posted/discussed on our app.

## Part 3: Prototype Screen Mockups

Home Page:

The image shows a prototype of a website homepage titled "The Game Hive." The header includes a logo, navigation links for "Getting started," "Components," and "Documentation," and a "Login" button. The main title "The Game Hive." is prominently displayed, followed by the tagline "Where Gamers Gather." On the left, there's a sidebar with "Sort & Filter" options, including "Popular Today" (selected), "Upcoming," and "Newest." Below this are various genre filters like Point-and-click, Fighting, Shooter, etc., each with a checkbox. At the bottom of the sidebar is a "Feedback" icon. The main content area is titled "Popular Games" and features a large placeholder box for game cards, with one card for "S.T.A.L.K.E.R. 2: Heart of Chornobyl" visible.

## Recommendation Page:

The screenshot shows a user interface for a recommendation service. At the top, there is a navigation bar with a logo on the left, followed by three dropdown menus: "Getting started", "Components", and "Documentation". On the far right of the bar is a "Login" button. Below the navigation bar is a large, rounded rectangular container with a light gray background. Inside this container, the title "Your Recommended Game: Hollow Knight" is displayed in bold black text. Below the title, there is a paragraph of text: "Based on your preferences for Breath of the Wild, Doom Eternal, and Pokemon Sword and Shield". Underneath this paragraph, there are three bullet points: "Why You'll Like It: Exploration: Like Breath of the Wild, it offers a vast, interconnected world filled with secrets, lore, and beautiful art design.", "Combat: While not as fast-paced as Doom Eternal, its challenging combat requires precision and timing, offering a rewarding experience.", and "Progression: Similar to Pokémon, you'll acquire abilities and upgrades that allow you to explore more of the map and grow stronger.". In the bottom-left corner of the main container, there is a small, dark rectangular button with the word "Next" in white text.

## Part 4: Metadata Schema

Item Type 1: Video Game

Name of Property	Description of property	Example Value
Game Name	The official, full name of the game	Overwatch 2, Diablo V, Call of Duty Black Ops 6
Game Release Date	Release date of game	2018
Game Cover art	A cover of the game	Eg a jpeg or png of game cover 
Game synopsis	A synopsis of game	"Explore the lands between"
Game Publisher	Publisher(s) of game	Activision
Game Platforms	Platforms game is playable on	Pc, Xbox, playstation
Game genre	The genre(s) of the game	action, strategy, horror

Game Rating	Rating given to game	7.5/10
-------------	----------------------	--------

### Item Type 2: User

Name of Property	Description of property	Example Value
User Name	User created name	Gamer07, ilovecookies28, testudo72
User Join Date	Date the user joined	Jun 8 2022, Dec 2 2019
User Profile Picture	PNG, JPG, WEBP, SVG profile picture of the user	mydog.png, tracer.jpg
Tags	Video game tags the user is interested in	[shooter, first-person], [rhythm, rpg, farming, simulation ]
Favorites	Top 10 favorite video games (index 0, being most favorite)	[ The Legend of Zelda: Breath of the Wild, Elden Ring, Persona 5 Royal, The Witcher 3: Wild Hunt, Hollow Knight, Red Dead Redemption 2, Super Mario Odyssey, Dark Souls 3, Stardew Valley, Celeste ]

Item Type 3 : User Post

Name of Property	Description of property	Example Value
User	The user that written the post	Gamer07, ilovecookies28, testudo72
Post Title	Title of the post	“Legend of Zelda new speedrun record”
Post Date	The date this post was created	Jun 8 2022, Dec 2 2019
Upvotes	Number of upvotes	478, 234, 20, 2
Tags	Tags that this post is related to	[shooter, first-person], [rhythm, rpg, farming, simulation ]
Related Game	The game this post is related to, if any	“Legend of Zelda”
Post Content	The content of the post	“Recently a user had beaten the game in under 5 minutes, setting the new record...”
